TI - External compsn. for cosmetics drugs etc. - contains sialaden mucin of mammals
AB - J61210013 Agent contains sialaden mucin of mammals.
- Examples of mammals include cattle, horses, pigs, goats, etc. Sialaden mucin is a glycoprotein which is produced in submandibular gland, sublingual gland, or glandula parotidea and extracted from sialaden and purified. It is a macromolecule (molecular wt.: 100000-1000000) contg. sialic acid. Since sugar parts and protein parts in mucin are structurally linked by sugar-amino acid linkage, it is distinguished from acidic glycoproteins of egg albumin or serum. It contains, other than sialic acid, the main ingredient, N-acetylgalactosamine, N-acetylglucosamine, D-Galactose, or L-fucose.
- USE/ADVANTAGE - Mucin contains in the agent has good physiological activities, i.e. the protection of cells or tissues by its viscosity, water-retention, moisture-retention by ion-control, skin protection, or skin activation. The agent may be applied to cosmetics, drugs, agents other than medicines, etc.. (3pp Dwg.No.0/0)
